PROJECT PROFILE

DISNEY SKYLINER

Walt Disney World Resort in Orlando, Florida opened a new transportation system in 2019 called the Disney Skyliner. The Disney Skyliner gives guests the ability to easily travel back and fourth from each resort and park. This transportation system is both fun and efficient.

Duraframe Steel Framing Solutions used light gauge metal to prefabricate the curved English Mansard roof framing for the central hub of the Skyliner. Prefabricating the roof framing out of Curv Trak, our proprietary flexible radius curved metal framing system, helped increase the project's rate of construction.
