

FIRST BIBLE BAPTIST

Duraframe Steel Framing Solutions utilized light gauge metal framing to complete a variety of projects within First Bible Baptist Church in Hilton, New York.

Curv Trak, our proprietary curved track framing system was utilized throughout the building to create a unique decorative ceiling and 20 large auditorium acoustical ceiling clouds.

We prefabricated non-curved steel framing sections for large portions of the ceiling and auditorium seating as well. Prefabrication of light gauge metal framing allowed this project to be constructed quickly with precision.
