

REGAL CINEMAS

Regal Cinemas at Walden Galleria Mall is one of many Regal locations Duraframe Steel Framing Solutions helped to construct. Light gauge metal framing was used throughout each theater to create a strong platform that seating could be installed on.

Curv Trak (our proprietary flexible curved metal framing system) was used to prefabricate radiused ceiling clouds within each theater for acoustical treatment. All ceiling clouds were hung using the M534 hanger system to ensure adjustments could easily be made in the future. Additionally, Duraframe was responsible for prefabricating interior soffits throughout the hallways and main lobby.
