PROJECT PROFILE

RIVERS CASINO

Duraframe Steel Framing Solutions worked with precision to complete the elegant ceiling within Rivers Casino in Schenectady, New York. We used our flexible curved track solution in conjunction with light gauge metal framing to prefabricate radiused ceiling soffits hung with the M534 hanging system. This allowed for rapid installation of the soffits, and also makes future positioning adjustments significantly easier.

Rivers Casino is just one of many intricate projects that have been constructed using Curv Trak, our proprietary curved light gauge steel framing system. Due to the prefabrication of all architectural framing throughout the casino, this project was completed smoothly and efficiently, ensuring all project deadlines were met.
